Can anyone briefly tell me what the differences between idl and pv-wave are, or the strengths and weaknesses of pv-wave compared to IDL. I'm quite familiar with IDL but I don't know much about pv-wave and after reading the pv-wave brochures, I can't really see a difference. pv-wave code itself seems identical to idl. Also, Visual Numerics doesn't seem to have a demo.

Any comments would be appreciated,

Thanks,
