sean,

here are some examples of long string output with&without imbedded
linefeed characters,

```
 astr='1111111111111111111111111111111111111111111111111111' +$
    '2222222222222222222222222222222222222222222222222222'+$
    '3333333333333333333333333333333333333333 and so on...'
print, astr

LF=string(10B)
 astr='1111111111111111111111111111111111111111111111111111' +LF+$
     '2222222222222222222222222222222222222222222222222222'+LF+$
    '3333333333333333333333333333333333333333 and so on...'

print,format='("1111111111111111111111111111111111111111111111111111 ",/,'+$
           ' "2222222222222222222222222222222222222222222222222222",/,'+$
           ' "3333333333333333333333333333333333333333 and so
on...")'
```

best of luck,
george
