Is it possible
 to open a window,
 place the cursor in that window and
 nevertheless get keybord events with GET_KBRD() ?

Code :

```
window, /free, xs=256, ys=256 ; open window
tvcrs, 128, 128, /device ; place cursor in window
q = get_kbrd(1)    ; ask for keybord event
 <hit any key>
print, q   ; show key
```
