Folks
hi,
I am converting an image from raster to png in ubuntu and i am having this error:

bash: ${lenRemainder}: substring expression < 0
Reading crop information from: ./20060505.res
Image Width ..5176..
Image Format ..ci2..
cpxfiddle: command not found
Converting A_20060505_crop.ras to format: png...
convert: improper image header `A_20060505_crop.ras' @ error/sun.c/ReadSUNImage/302.
convert: missing an image filename `A_20060505_crop.png' @
error/convert.c/ConvertImageCommand/2940.
There was a problem with imagemagick (convert) when I ran: convert A_20060505_crop.ras
A_20060505_crop.png
Name of rasterfile: A_20060505_crop.png

and at the end i do not have the *.png image can some one please tell me what is going on?
Cheers,
Dave
