More stuff about setting LIVE_TOOS (i.e. LIVE_PLOT):

also I found how to set the xrange to display
IDL> x = findgen (100) ; for example
IDL> y = sin(x)
IDL> style=live_style('plot',graphic_properties={min:40,max:60})
IDL> live_plot,y,independent=x,style=style,xrange=[40,60]

So only the xrange is plot only from 40 to 60.

Remark: If this is written in the documentation, please stop me
from posting by sending a message to me!
