
Subject: widget builder

I'm trying out the 30-day evaluation of IDL 5.0 and I'm just wondering if there is a successor to "wided", the widget builder. I've used the widget builder before with IDL4.0, to build the frame work for a GUI and since it's labelled as obsolete I was hoping there would be an updated version. Is there a better way for making a complex GUI, besides coding it in manually.

Thanks,

Alvaro Ivanoff
