Yeah, right!

I'm traveling incognito this week, but I've tried to log into
that damn site too and I can't do it either. I've heard that
the ISP had the server go down with severe hardware problems.
It looks to me like they don't have it fixed yet. I'll send
them an e-mail, but won't be able to contact them to harange
them in person until I return from England.

I'll see if I can send you these files by e-mail, but I have
to work out a better e-mail connection first!

Cheers,

David
