: I tried an application with WWInit that should appear in the foreground.
: WWSetValue with the keyword "show" or display" dosn't work first time
: after starting PV-Wave. After I swaped the windows with ALT-TAB back and
: forward, my application works fine. How can I bring the window into the
: foreground just ater initializing PV-Wave?

: I'm using PV-Wave 6.1 under Windows95.

: Here is a part of y code:

```
: top = WwInit('example', 'xyz', layout, 'DestroyCB', $  
:           background='SkyBlue',/Vertical);  
: ...  
: ...  
: status = WwSetValue(top, /Show)  
: status = WwSetValue(top, /Display)  
: Wwloop
```

: Many thanks for any suggestions.

Try the /Raise keyword. And, no, it is not in the docs ;-)
It is one of those secret keywords . . .
