I tried an application with WwInit that should appear in the foreground. WwSetValue with the keyword "show" or display" doesn't work first time after starting PV-Wave. After I swaped the windows with ALT-TAB back and forward, my application works fine. How can I bring the window into the foreground just ater initializing PV-Wave?

I'm using PV-Wave 6.1 under Windows95.

Here is a part of y code:

```
top = WwInit('example', 'xyz', layout, 'DestroyCB', $
          background='SkyBlue',/Vertical);
```

```
...
```

```
...
```

```
status = WwSetValue(top, /Show)
status = WwSetValue(top, /Display)
Wwloop
```

Many thanks for any suggestions.
