Subject: idl: how to extract pictures from slicer?
Posted by alex on Sat, 29 May 1993 16:34:02 GMT

Hello,
I succesfully used the slicer widget in idl to visualize
flux line lattices in superconductors. The problem I have
now is: how can I get those nice pictures out of the slicer?
Printing works somewhat by copying the window with xv,
but more complicated stuff like animations wont work this
way.
Is there a way in idl to copy the contents of the slicer
show-window to a byte array (or do a replot to another
window)?

Yours
  Alexander
