HELP!

I am trying to do an FFT on a large image (6000x6000 byte) and about 20 minutes into the procedure I get this error:

```
% Unable to allocate memory: to make array.  
Not enough space
```

Is this a PV-Wave problem or a procedure problem? I'm running PV-Wave 4.01 on an SGI 340 VGX with 256 Meg RAM and 338 MB Swap (694040 blocks) What can I do to get around this problem?

Thanks for any help

Jon
