Hello, IDL Users -

I've asked these questions a couple times before, with no response. Don't be shy! I'm running IDL 2.4.0 under Ultrix 4.1. A couple short questions:

What controls the background color for widgets? Is it in the Xdefaults file? The same application has a blue background in one account, and white in another.

How can I prompt an exit from IDL from a widget application? Just putting EXIT in the event handler gives me a callback error, although it works fine for non-widget routines.

Thanks,
