Subject: [Q] Spacing of axis tick values from axis?
Posted by R.Balthazor on Fri, 24 Oct 1997 07:00:00 GMT
Hello,

I'd be grateful if anyone can help me with this.
Do you know how to change the distance of the axis numbers from the axis
itself?   For example,

     PLOT,[0],[0],/NODATA,XRANGE=[1,4]

gives a nice box where the bottom looks something like (crude ASCII
representation):

```
    |          |
  0 |_____|_____|_____|

     1    2    3    4
```

But what I want is the axis numbering moved up real close to the axis,

```
    |          |
   0|_____|_____|_____|
    1    2    3    4
```

Is there any way to do this? I can see a long workaround by using
invisible AXIS all over the place, but is there a more elegant way?

Thanks in advance,
Richard.
