
Subject: defining Keys

Hi,

Is there anyone who have tried "define_key" with IDL5.0?

The following is my programm:

```
IDL> setup_keys
```

```
IDL> define_key, 'f1', 'print'
```

It works well if I use IDL4.0. But pushing "f1" does not give me "print" after I use IDL5.0. I found the difference between IDL 4.0 and 5.0 from the command "help, /keys." as follows:

IDL4.0	IDL5.0
-----	-----
IDL> help, /keys	IDL> help, /keys
...	...
F1 <\033[001q> =	print F1 (\033[11~) print
...	

Although both versions indicate that "f1" has been defined as "print", the symbol (\033[11~) in IDL5.0 sounds strange.

Any clue?

By the way, my machine is SGI. Thanks in advance.
