## Subject: Read color table in Win95 PV-WAVE?
Posted by Ewan A. Macpherson on Sun, 09 Nov 1997 08:00:00 GMT

How can I get a copy of the current color table into an array?  Is it
stored in a system variable? I want to be able to take a BYTARR and
convert it to an image with IMAGE_CREATE, incorporating a particular
color table, and then write it to a GIF file with IMAGE_WRITE.  The help
on IMAGE_CREATE claims that the current color table is included by
default, but all I can get is greyscale by the time the GIF is written.

I'm using PV-WAVE 6.10 under Win95.

Thanks for any ideas (or better ways to write GIFs).
