Subject: text and arrows in three dimensional plots? Posted by vetoulis on Thu, 06 Nov 1997 08:00:00 GMT

Hello all

The problem I am facing is the following:

I use create_view to generate a 3D coordinate system. Then I draw some curves using the plots procedure.

How do I place text at position (x,y,z) (in data coordinates)? Is there any 3D analog of the xyouts procedure? I'd like to label some of these curves etc.

And how can I draw an arrow from (x1,y1,z1) to (x2,y2,z2)? I can assemble it myself from three line segments, but given that there is an arrow intrinsic for 2D, I am wondering if there is something equivalent for 3D.

Thanks a million for any help you can offer.
