Hi,

I am trying to call external programs (written in C) using LINKNLOAD
in PV-Wave 5.0 running under SunOS4. However, I don't know how to
make it work. When the .pro program is executed, the following error
messages occurs:

% LINKNLOAD: Error loading sharable executable.
     Symbol: _test_wrapper, File = myfile.so
     Bad file
% Execution halted at TEST_MY_CODE <test_my_code.pro(228)> (LINKNLOAD).
%   Called from $MAIN$.

Could anybody point out what I am wrong. I also run the example
programs provided in $WAVE_DIR/demo/interapp/linknload/example.c, but
it also doesn't work !! Could anybody tell me how to make the
LINKNLOAD works, and provide some simple programs to me. Thanks so
much !!
