Subject: Pixel Information
Posted by Jonathan Greenspon on Wed, 26 Nov 1997 08:00:00 GMT

I am trying to figure out a method of getting IDL to look at a 640x480
image that I have equipment generating, and then take a certain pixel
(207,179 - for example) and save the infor on that pixel only.

Then I can plot out or run an FFT analysis on the values within that
point on a given day....

Any ideas?
