Subject: wave: large polygons filling
Posted by graphics on Tue, 18 May 1993 12:52:34 GMT

Hello,
Does anybody out there know if the latest version of
PV-WAVE can produce filled polygons with more than
750 vertices for postscript output?
Please in your answers refer to the version of the program.
I know that in version 3.10 "polyfill" routine refuses
to generate output if the number of polygon vertices
exceeds 750 and the output device is "ps"

Thanks in advance
Grigoris Patrinos
