Has anyone had problems with size when using the printer object?
When I print using the IDLgrPrinter object i have several problems.
1) The print dialog widgets don't work very well. If compression is
turned on then nothing prints and you are not told why. After choosing
Print you then have to go to the Setup Printer Dialog. After you set
this up then it prints!?
2) When it finally prints, the image (IDLgrScene) is a few inches wide
by about an inch in the lower left hand corner of the page, regardless
of the paper size setting.
Anyone else encounter these problems?
-matt
