Does anyone know how:

(a) Allow me to use proper notation for ions in figures etc?
ie HI where the 'I' is slightly smaller than the H?

(b) Similar question, on my figures the axis label T(subscript)e
looks odd as the 'e' is too small for a decent size of all the
rest of the label. Can I control the 'shrinkage factor' of
subscripts?

(I did read the fine manual!)
