Try:
```

```
!P.MULTI = [6*6,6,6] ; the !P.MULTI[0L] = 6*6 tells IDL that there  
; are still 6*6 plots to be done so the next plot will not  
; erase the window. If !P.MULTI[0L] = 0, IDL erases the  
; window before the first plot.
```

```
