Hi,

I have problems with the right font for widgets.

I am working with idl.5.0.3 on Win95 PC and AIX.

I have learned that I only can use on the PC the !3 font but not on the unix side.

ok, let me use courr12 on the unix.

But the more problematic difference between both system is that on PC the font is used by the label

and the input field.

On the unix it's only used for the label (e.g. TITLE:'). That's bad.

```
bb = WIDGET_BASE(top,row=1,/frame)
```

```
id_title=CW_FIELD(bb,title='TITLE: ',uvalue='ID_TITLE',xsize=115,/all_events, font='courr14')
```

I will be glad to hear any ideas to get around this nonsense.

Reimar
