Subject: IDL Widgets

Hello,

Two questions:

1) How do you create a small button? half size?

i.e. ----- -----

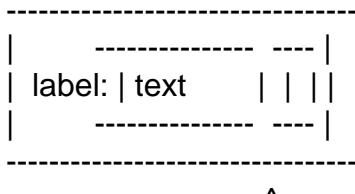

normal size

2)

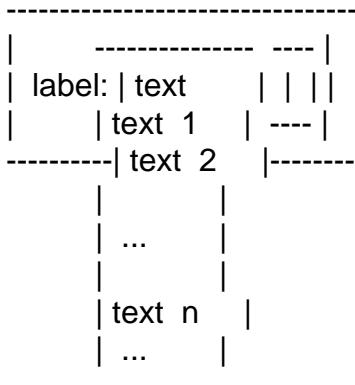

I want created a compound widget similar to CW_PDMENU

BUT with a List widget

^
|__ BUTTON associated with a LIST
(value of button is a bitmap)

And if I click on BUTTON

and select "text n"

```
-----  
|      ----- --- |  
| label: | text n   | | ||  
|      ----- --- |  
-----
```

(yes! similar to Microsoft Windows 3.1 :-)

Do you have idea?

thanks,
