Subject: IDL Widgets

Hello,

Two questions:

1) How do you create a small button? half size?

i.e. ----- -----
| | | | <-- button
| | | |
| | -----
| | | | <-- button
| | | |
----- -----
normal size

2)

I want created a compound widget similar to CW_PDMENU

BUT with a List widget

```
-----  
|       -----   --- |  
| label: | text     | | |  
|       -----   --- |  
-----  
          ^  
      |___ BUTTON associated with a LIST  
          (value of button is a bitmap)
```

And if I click on BUTTON

```
-----  
|       -----   --- |  
| label: | text     | | |  
|       | text 1   | --- |  
-----| text 2   |-----  
      |       |  
      | ...    |  
      | text n |  
      | ...    |  
-----
```

and select "text n"

```
-----  
|      -----   --- |  
| label: | text n   | | ||  
|      -----   --- |  
-----
```

(yes! similar to Microsoft Windows 3.1 :-)

Do you have idea?

thanks,
