Subject: Segmentation Fault Posted by enkpong on Tue, 20 Jan 1998 08:00:00 GMT View Forum Message <> Reply to Message

Hi,

I have a couple of questions about calling an external program in PV-Wave (v5.0). I don't know whether these questions have been answered before.

I have some application programs that were written in standard C. When I used LINKNLOAD to call these programs with a wrapper routine, I got SEGMENTATION FAULT occassionally. The result is -- the session crashed and returned to the operating system. Does anyone encounter this kind of error before ?? Is this error occurred in calling external programs only ?? Is there any way to avoid it ??

I haven't tried doing the same thing in IDL, but I would be very happy to listen to IDL's folks experience. Thank you!!

Regards, KP.
