Hello,

i got 3 Answers at my call for IDL-Language-Mode for NEDIT 5.0.
the forth sent me some code.

Ok, I got no sufficient help: So here is my first version of it.
I looked into the other Modes and tried to learn something about
RE (there are books completely about RE)...

... and computed this:

```
# Preferences file for NEdit
#
nedit.highlightPatterns: C:Default\n\
NEdit Macro:Default\n\
IDL:1:0{\n\
comment:";":$$::Comment::\n\
string:(""|)":(""|)":\\n":String::\n\
numeric constant:< ((0(x|X)[0-9a-fA-F]*))|(([0-9]+\\.?[0-9]*)|(.\\.?[0-9]+))((e|E)
(\\"+-)?[0-9]+)?)(L||UL|ul|u|U|F|f)? >"::Numeric Const::D\n\
keyword:< (pro|function|return|goto|if|then|endif|else|endelse|case|of
|endcase|default|while|do|for|endfor|repeat|until|endrep|beg in|end) >"::Keyword::D\n\
braces:"{}"::Keyword::D\n\
operators:"<(mod|and|not|or|xor|eq|ge|gt|le|lt|ne)>"::Keyword::D\n\
idl commands:"<(print|tvsc1|tv|window|wait|wdelete|xyouts)>"::Keyword::D\n\
}
nedit.languageModes: IDL:.pro:::::\n\
```

it does not work complete but other freaks may complete my work!

Greetings to the Coyote
