Subject: How do I plot to a different X-terminal from IDL?

---

I'd like to have some IDL code send plots both to the X-terminal I am running from, and to another. Can anyone tell me how to do this? (I will run this under VMS and DECnet, but could switch to UNIX, if it matters.) I know I will have to handle the security on the remote X-terminal.

Thanks in advance (I did look in the manuals).
