Subject: DYNAMIC_RESIZE Keyword in IDL 5.0.3
Posted by wmn on Mon, 19 Jan 1998 08:00:00 GMT

Following Testfile gets bigger with every press on the button, it should
behave like this in x direction but it also does it in y direction. This error
doesn't occur in IDL 4. We have a lot of widgets with the Keyword
'DYNAMIC_RESIZE', and they all become bigger and bigger with every action.

I would be very lucky to get a good solution for this problem. Thank you!

```
pro press_but, event
    WIDGET_CONTROL, event.id, GET_VAL = str
    WIDGET_CONTROL, event.id, SET_VAL = str(0)+' '
end

pro test_dyn_res
  base = WIDGET_BASE(/ROW)
   subbase = WIDGET_BASE(base, /FRAME)
    button = WIDGET_BUTTON(subbase, VAL = 'Press Here', /DYNAMIC_RESIZE, $
       EVENT_PRO = 'press_but')
    label = WIDGET_LABEL(subbase, VAL = 'Label1')
   subbase2 = WIDGET_BASE(base, /FRAME, /COL)
    label2 = WIDGET_LABEL(subbase2, VAL = 'Label2')
  WIDGET_CONTROL, base, /REALIZE
  XManager, 'test_dyn_res', base
end
```
