A newbie's question.

When I try to open a data file in Insight (PC version 5) it will not import the .dat files supplied in the examples directory. The plugins directory under Preferences is correct (the default directory), and the plugins in the directory are:

myabs.pro

mybias.pro

mybias0.pro

mydat.pro

myppm.pro

mylinsys.pro

mynegate.pro

mystdvar.pro

myvis.pro

but the only files the file import will recognise are the standard image files and ascii.

Any suggestions?

Sue
