
Subject: IDL 5.0 (TvRd LoadCt) problems with true colors ???

Hello

I try to use true color features of idl 5.02 under Linux 5.0.32 (Matrox Milenium 24 bpp). tvrd gives strange results. But perhaps I understand something wrong. The following code should illustrate my problem:

```
loadct,ct ;ping, sometime in the session  
loadct,0 ;pong, sometime in the session
```

```
dd=bytsc1(dist(500,500))  
image=bytarr(3,500,500)  
for i=0,2 do image(i,*,*)=dd  
tv,image,true=1
```

```
; until here it works fine  
; but now:
```

```
muck=tvrd(0,0,500,500,true=1)
```

```
tv,muck,true=1
```

```
; some areas of image ar ok  
; others not
```

If I restart IDL and don't do a 'loadct', every thing works fine.

Is there any idea what's going wrong? Are there any positive experiences with IDL, Linux and True Color?

Thanks
Rene
