Read the article about positioning plots on my web page:

[http://www.dfanning.com/tips/position\\_plots.html](http://www.dfanning.com/tips/position_plots.html)

The article describes how to position a plot in a graphics window, but the principle is exactly the same whether the window is a display window or a PostScript window of the size you describe above. You can also look at the program ASPECT on my web page. This allows you to create a plot of any specific aspect ratio (i.e. what you want to do here) whether on the display or in PostScript output.

Cheers,

David
