
Subject: How to run Envi in batch mode ??

Hi all,

IDL. Version 4.0.1c (sunos sparc).
ENVI v2.6

I'm trying to creat a ENVI batch script to simply
open a GIF image, perform a linear stretch using STRETCH_DOIT,
and write the result to a new file.

The problem is that when I run the script it bails on
the ENVI_INIT funtion.

```
IDL> envi_init, /batch_mode, batch_unit=unit
% Attempt to call undefined procedure/function: 'ENVI_INIT'.
% Execution halted at: $MAIN$
IDL>
```

This is a full envi license, not RT envi. What am I missing?
The documents state the script should be run from the IDL
prompt. ENVI runs fine but I cannot seem to call key ENVI
functions via the IDL command line. It seems like my environment
is not set up correctly or something.

???

Thanks,
Scott
