Hi, i posted a message a few days ago, and nobody answered me but one (thanks !). I wanted an example of programming with the SVDfit procedure in IDL 4.0. I don't really know how to use it with an exponential function as the basis function ($f(x) = a(0) \exp(-a(1)*x - a(2))$, with a as the parameters). Thanks for any help, mail to fernande@irm.chu-caen.fr
