
Subject: slicer3 and size of the screen

Hello,

I use slicer3 to visualize some datas. I load a file containing 49 3D arrays. Then I use the "data" button to select which of those arrays I want to play with. But my screen seems to be too small to let me select the 5 last ones! The menu doesn't have an arrow at the last line to let me view a "following" menu. Does anybody have a solution (other than to find a bigger screen!)?

By the way, David, I received your book and made already a lot of progress in understanding Graphical Display. I also understand that I would have to re-write most of the code I wrote! The use of pointers and structures as arguments of procedures make the job really easier to do and update. Thanks a lot.

Best regards,
Christophe.
