
Subject: cursor color in PVWAVE

Has anyone ever tried to change the `_color_` of the graphics window cursor in PVWAVE in X Windows? (I'm running in Solaris 2.6 on a Sun Sparcstation.) I know that X Windows allows you to set a foreground and background color for the cursor independent of the foreground and background color of the window, but PVWAVE does not have this as an option to its DEVICE procedure. The DEVICE procedure will only let you change the cursor image and the cursor hot spot.

There must be a way to do this... or is it impossible until PVWAVE adds it in a future release?
