I have a bunch of IDL code that was written to run under SUN OS and I'm trying to get it to run under Win95. I noticed that there is a call_external in my stuff. I'm still relatively new to IDL and hopefully this isn't a really stupid question, but my understanding is that call_external calls compiled object code. My question is, can i use the .o file that was compiled under unix, or do i need to recompile it on the PC, and if I do does IDL have a preferred C compiler for this task?

thanks -

Ebeth Jones
