
Subject: Call_External problem under win95

Hi,

I seem to be having problems getting the call_external example (dlltst32) in IDL 5 to work.

If I compile the c source using either Borland C 4.5 or Visual C 5.0, the DLL is created OK, but when it is called from the IDL program I get an error message:-

"CALL_EXTERNAL: Entry TestOne not found in DLL dlltst32.dll"

I seem to remember from the newsgroup that I need to create a .DEF file for some obscure reason, but don't have a clue how to create it.

Any advice for a novice windows programmer would be most welcome.

Thanks

Calum.....
