Does anyone have a "recursive" tag_names like function. I would like to pass in a structure and get back a string array with members down to the bottom level. For example:

```
input = {a:{m,n}, b:{r,s,t}, c, d, e}
```

```
output = recursive_tag_names_function(input)
```

```
print, output
```

```
'input.a.m', 'input.a.n', 'input.b.r', 'input.b.s', 'input.b.t',  
'input.c', 'input.d', 'input.e'
```

Thanks,
Cathy
