   Once again, the most elegant platform shows its superiority (or is that
just the quality of the RSI programmers who have to program according
to the HumanInterface Guidelines?):

IDL Version 5.0.2 (MacOS PowerMac). Research Systems, Inc.
For basic information, enter "IDLInfo" at the IDL> prompt.
IDL> window, xsize = 0
% Bad window size
% Execution halted at: $MAIN$

.... and that's it.

   By the way, David, in what cities will your group be meeting? My name is
Joe, and I've written _way_ too many lines of IDL code.

                            Joe
