<HTML>

I've tried to use Insight to view an HDF file., but to no avail.

I used the "HDF Browser" window to import 4 SDS' from my HDF file.

In the main Insight widget, I clicked the "File" button and brought up

the Data Manager widget, which showed the data from the imported

SDS'. But when I selected the "Line Plot" option of the "Visualize"

button, the following warning message was shown:

<P><I>Error occurred while creating a visualization.</I>

<I>There is no data defined. You must first create or import</I>

<I>data before you proceed.</I>

<P>Anyone know what I've done wrong? I mean other than expecting

Insight to work.

<P>Thanks in advance.
