well, let me say that 5.1 looks great. Now back to the subject topic

For ages I griped about a lack of true polar-coordinate support for two D data.

On the cover of Physics Today (and also as a picture of the week on the RSI site), is the experimental data regarding the Wigner distribution (I hope I am getting this right).

And what do we see? That the skirt of the surface plot is hiding some of the data. Not very commendable for software that is suppose to show us the data.

I did send an official request to RSI, btw.

still a very happy IDL user,

mirko
