Subject: cursor color in IDL draw widget

Hi,

I am using IDL version 5.0 on an SGI O2. In one of my draw widgets I use a modified cursor (using the CURSOR_IMAGE and CURSOR_MASK keywords of DEVICE). This works fine, but I would also like to change the COLOR of this cursor (into something else then white or black, let's say I want to have it purple, for example). Did anyone manage to do so?

Ciao, Jacco
