Hi,

Does anybody is working with the control activeX IDLDrawX?
I got some problems with it. In the same session of Visual Basic,
I can run my prog just one time. If I try to run again my prog in
the same session of VB, IDL failed to initialized. I got the same
error when I try the code in the book "What's New In IDL 5.1".

Is it just a beta version of the control?

Any help will be greatful,

Skiso
