This will gave an error like:

```
print,(all(part1))(part2)
      0.00000    1.00000    2.00000
% Temporary variables are still checked out - cleaning up...
```

I know there are many solutions to get around of this malfunctional code.

I was really surprising me that's it gaves this message.

PRO ind_err

```
all = findgen(100)
part1 = findgen(10)
part2 = findgen(3)
```

```
(all(part1))(part2) = part2*0.
```

```
print,(all(part1))(part2)
```

END
