Dr. Fanning:

The application should be similar to `d_flythru.pro`,  
type `d_flythru` under IDL prompt to test it.  
The only difference is :

`d_flythru` has two inputs:

- 1) a 64x64 binary array from `elevbin.dat` which is the surface array
- 2) a JPEG image as the texture image

My application will have only one input: a 3D array.

Thanks for your help.

Ding
