hello

I have to produce a lot of gif files with IDL.

At the moment I plot everything in a

X window (set_plot,'x') sized as I need

(window,0,retain=2,xsize=700,ysize=500) and

then I put the window in a bytearray (tmp=tvrd()), the gif file is then created with:

write_gif,filename,tmp

All this is inside a big do loop with all the plots I need.

Now, I'd like to avoid the screen plot, setting z-buffer device but:

HOW I CAN DEFINE THE "XSIZE" AND "YSIZE" WITH THE Z-BUFFER?

the default sizes are too small for me!!! I need more resolution!!!

THANKS IN ADVANCE

Damiano
