
Subject: Color in MPEGs ???

Hi,

I have followed the instructions in HELP
and generated MPEG movies using the

```
mpegID = MPEG_OPEN() ;Open an MPEG sequence.  
MPEG_PUT, mpegID, IMAGE=image0, FRAME=0  
;Add the first frame.  
MPEG_PUT, mpegID, IMAGE=image1, FRAME=1  
... ;Subsequent frames.  
MPEG_PUT, mpegID, IMAGE=imagen, FRAME=n  
;Last frame.  
MPEG_SAVE, mpegID, FILENAME='myMovie.mpg'  
;Save the MPEG sequence in the file myMovie.mpg.  
MPEG_CLOSE, mpegID ;Close the MPEG sequence.
```

sequence in help. It generates MPEG movies very well.

Problem:

Although the images on the screen are in color, the
MPEGs are always black/white only.

If I use xinteranimate to animate the same image frames
and create the MPEG with the MPEG button these
come out in color.

What is missing?

Thanks,

John Boccio
