
Subject: Z-order of IDL widgets and IDL 5.0.3

Howdy,

I have come across a problem with IDL version 5.0.3, and was wondering if there is a known workaround. I am running SunOS 5.5.1, with CDE, trying an IDL program written under 4.0.1c, and I noticed that z-ordering of separate widget bases is not maintained, and iconized widgets restore themselves. When the "workspace" displaying the IDL widgets is left and then re-entered, the new z-order of the widgets reverts to the creation order with iconized widgets restored. Is there any way to stop this behavior?
