Hi

I've written a routine using WIDGETS and calling the XMANAGER.

Calling it once it just works fine.

Calling it a 2nd time I get the following ERROR-message from xmanager:

```
% WIDGET_CONTROL: Invalid widget identifier: 3065016.
```

```
% Execution halted at XMANAGER </home/ipisun104/idl/lib/widgets/xmanager.pro(
  374)> (WIDGET_CONTROL).
```

```
%   Called from WMX_ELST </home/ipisun104/pvi/wave/wm/wmx_elst.pro( 313)>.
```

This is strange. Prior to calling the xmanager I printed the ID I call the xmanager with and test its validity via WIDGET_INFO:

```
id:   4550984 - valid:      1
```

So my ID is not only valid, but it's also not the id XMANNAGER is complaining about.

Any hint will be appreciated, Karl
